Holographic Design Inc. Was incorporated in 1981 as a for-profit organization. Holographic Design, Inc. Is unequalled in creativity and technical mastery of the holographic medium. Among our explored areas are computer generated holograms made in co-operation with the University of Illinois. We produced a series of computer generated holograms that were featured in an exhibition for Siggraph, the most important computer graphics trade show in the world.

We create high impact large format display holograms, embossed holograms and embossed security devices for major corporations In our state of the art research and development facilities.

Your visit has generated a great deal of interest and we would be pleased to begin exploring ways our two companies can work together.

Some thoughts that can be addressed are :

- . The exchange of ideas between Gnxpert and the Museum of Holography and Holographic Design, Inc.
- . Sharing knowledge and experience with new holographic technologies
- . Commercialization of holographic technologies through merchandising
- . Co-operation in the use of Holographic Design laboratories for completion of Gnxpert prototype
- . Discuss the benefits of a co-operative venture between the Museum of Holography and Gnxpert.

Sincerely ,

Loren Billings

Founder and Executive Director of the Museum of Holography
President of Holographic Design, Inc.
