

FUJIFILM Silver Halide Holographic Film F HL

- > High-Speed
- > High-Resolution
- > Fine Grain
- > Silver Halide Technology

FUJIFILM Holographic Film is a panchromatic, silver halide emulsion coated on a TAC (Tri-Acetate Cellulose) film base. The material can be used with a variety of lasers to produce monochrome or full color holograms. Processing characteristics are similar to other holographic films, but quality and consistency are unsurpassed.
