A NEWSPAPER FOR CHICAGO CIRCLE ALUMNI  
PUBLISHED BY THE UNIVERSITY OF ILLINOIS ALUMNI ASSOCIATION

Credit courses in holography—the interesting and highly scientific process involving laser will be offered in the department of art and also electrical engineering in September, I hear. In a tour of the "Gallery" which is home for the Holographic Center and Fine Arts Research, I talked with Lydia Billings, and her enthusiasm over the Center's association with Chicago Circle's academic areas was super. The 3-D aspects of holographic photography are almost life-like, and photography is only one area of laser potential.
