MANAGERIUM

The heaviest element known to science is MANAGERIUM.

This element has no protons or electrons, but has a nucleus made up of 1 neutron, 2 vice-neutrons, 5 junior vice-neutrons, 25 assistant vice-neutrons, and 125 junior assistant vice-neutrons all going around in circles.

Managerium has a half-life of three years, at which time it does not decay but institutes a series of reviews leading to reorganization.

Its molecules are held together by means of the exchange of tiny, tiny particles know as Morons.
